

HERE COMES
THE SUN

why red light?

The Fringe Light Therapy Face Mask is TGA-registered (class IIa) to reduce fine lines and wrinkles, making it the ultimate solution for achieving a flawless and radiant complexion. Our mask combines three powerful wavelengths of light therapy – red light (630nm), near-infrared light (830nm), and blue light (415nm) – for an all-in-one natural and safe solution for your skin concerns.

This hands-free, wireless, medical-grade, soft silicone mask has 234 LED light chips that deliver red, near-infrared, and blue light therapy uniformly over your entire face during a simple, 10-minute session. With three modes of use, you can achieve the perfect results for your skin type – age radiantly (red/near-infrared light), control blemishes (blue light), or rejuvenate your skin (red light).

an innovative, at-home skincare solution

- fine lines & wrinkles
